

PROJECT REPORT

ON

GAS AGENCY SYSTEM

Submitted By

Mailapilli Swathi

UMID03112569166

Introduction

The Gas Agency Management System is a web-based application developed to simplify and manage gas cylinder booking operations efficiently. This system helps gas agencies maintain customer details, booking information, cylinder delivery records, and payment details in an organized manner.

The project is designed using HTML, CSS, and JavaScript to provide an easy and user-friendly interface for customers and agency staff.

Customers can register, log in, and book gas cylinders online without visiting the agency directly. The system reduces manual paperwork, saves time, and improves the overall efficiency of gas distribution management.

Problem Statement

In many gas agencies, customer bookings and cylinder delivery details are managed manually using paper records and registers. This manual process consumes more time, increases paperwork, and may lead to errors in customer information, booking details, and delivery management. Customers also face difficulties in booking gas cylinders quickly and checking their booking status.

The Gas Agency Management System is developed to solve these problems by providing an online and automated booking system. The system helps maintain customer records digitally, simplifies gas booking operations, reduces manual work, improves accuracy, and provides faster service to customers. This project makes gas agency management more efficient, reliable, and user-friendly.

Objectives of Gas Agency Management System

1. To simplify the gas cylinder booking process.
2. To reduce manual paperwork in gas agencies.
3. To maintain customer records digitally.
4. To provide quick and accurate booking confirmation.
5. To improve efficiency in gas agency management.
6. To reduce human errors in booking and delivery details.
7. To save time for both customers and agency staff.
8. To provide secure storage of customer information.
9. To improve customer service and communication.
10. To automate gas booking and delivery management processes.

Online Gas Booking

Online Gas Booking is a digital service that allows customers to book gas cylinders through a web application or online system without visiting the gas agency directly. The Gas Agency Management System provides an easy and fast method for customers to register, log in, and place gas cylinder booking requests online.

In this system, customers can enter their details such as name, mobile number, gas type, and number of cylinders required. After submitting the request, the system stores the booking information and provides booking confirmation instantly.

The online gas booking system reduces manual work, saves time, improves accuracy, and provides better customer service. It also helps gas agencies manage customer records, bookings, and cylinder delivery information efficiently.

Features of Online Gas Booking

- 1.** Customer registration and login
- 2.** Easy gas cylinder booking
- 3.** Quick booking confirmation
- 4.** Digital customer record maintenance
- 5.** User-friendly interface
- 6.** Fast and secure service
- 7.** Reduced paperwork
- 8.** Efficient booking management

6. Payment Module

This module handles customer payment details.

Functions

- Payment confirmation
 - Bill generation
 - Payment record maintenance
-

7. Report Module

This module generates reports related to bookings and customer details.

Functions

- Booking reports
- Customer reports
- Delivery reports
- Stock reports

4. Gas Booking Module

This module helps customers book gas cylinders online.

Functions

- Select gas type
 - Enter booking details
 - Confirm gas booking
-

5. Delivery Management Module

This module manages cylinder delivery information and status.

Functions

- Update delivery details
- Track cylinder delivery
- Maintain delivery records

2. User Registration Module

This module allows customers to create an account in the system using their personal details.

Functions

- New user registration
 - Create user ID and password
 - Store customer information securely
-

3. Login Module

The login module provides secure access to users and administrators.

Functions

- User authentication
- Secure login system
- Password verification

Modules of Gas Agency Management System

1. Admin Module

The admin module is used to manage the complete gas agency system. The administrator can add customers, view bookings, manage cylinder stock, and monitor delivery details.

Functions

- Manage customer records
- View booking details
- Update delivery status
- Maintain cylinder stock
- Generate reports

Features of Gas Agency Management System

1. Customer Registration System
 - Allows users to create accounts with user ID and password.
2. Secure Login Facility
 - Provides secure access for customers and admin users.
3. Online Gas Booking
 - Customers can book gas cylinders through the system easily.
4. Booking Confirmation
 - Displays instant booking confirmation after successful booking.
5. Customer Record Management
 - Stores and manages customer information digitally.
6. Cylinder Delivery Tracking
 - Helps track gas cylinder delivery status.

7. Payment Management

- Maintains customer payment and billing details.

8. Admin Control Panel

- Enables admin to manage bookings, customers, and stock.

9. User-Friendly Interface

- Simple and easy-to-use design for all users.

10. Fast Processing System

- Reduces manual work and saves time.

11. Data Security

- Protects customer data using login authentication.

12. Report Generation

- Generates booking and delivery reports quickly.

13. Reduced Paperwork

- Maintains all records digitally instead of manual registers.

Advantages of Gas Agency Management System

1. Easy gas cylinder booking process
2. Reduces manual paperwork
3. Saves customer and agency time
4. Maintains customer records safely
5. Fast booking confirmation
6. User-friendly system
7. Helps in tracking cylinder delivery
8. Reduces human errors
9. Improves agency management efficiency
10. Provides quick customer service

Disadvantages of Gas Agency Management System

1. Requires internet and computer system
2. System may fail during network issues
3. Data loss can occur without backup
4. Needs regular maintenance
5. Requires basic technical knowledge
6. Security risks if passwords are weak
7. Software bugs may affect performance
8. Initial setup cost is high
9. Power failure can stop operations
10. Requires updates and monitoring regularly

GAS AGENCY SYSTEM – DEMO VIDEO (WITH PRESENTER)

Duration: ~6 Minutes

1. Introduction

Hello everyone, I am presenting my project Gas Agency System.

2. Home Page

This is the home page of the system. Users can login or register.

3. User Registration

New users can register with their details.

4. User Login

Registered users can login using email and password.

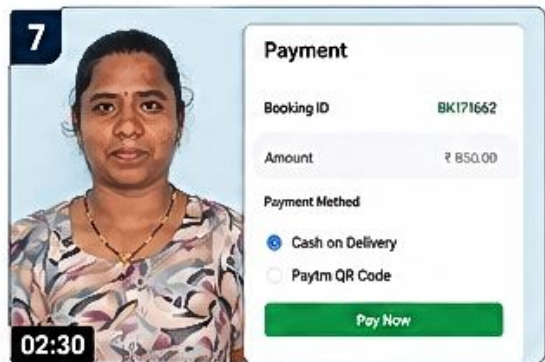

5. User Dashboard

After login, user dashboard is displayed.

6. Book Cylinder

Users can book cylinders by selecting type and quantity.

7. Payment

Users can pay online using Paytm QR code or cash on delivery.

8. Booking History

Users can view all their booking history.

9. Admin Login

Admin login to access the admin panel.

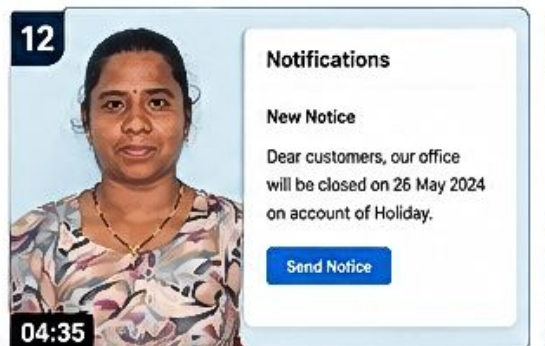

10. Admin Dashboard

Admin can view users and booking requests.

11. Approve / Reject

Admin can approve or reject booking requests.

12. Send Notices

Admin can send important notices to all users.

13. Firebase Database

All data is stored securely in Firebase Firestore.

14. Conclusion

This system makes gas booking easy and efficient.

15. Thank You

Thank you for watching my demo video.

TIPS FOR RECORDING

- Record your screen while showing the system
- Keep good lighting on your face
- Video length: 5 to 6 minutes
- Speak clearly and confidently
- Use a mic/earphones for clear voice
